# ⬙ RAPIDFORT

Secure your Software, Simplify Compliance

Automatically Identify and Remediate 95% of your Software Vulnerabilities with No Code Changes

Software vulnerabilities are a constant struggle for developers. The ever-growing number of threats creates a never-ending cycle of patching, leaving organizations exposed. New compliance regulations add another layer of complexity, especially for FedRAMP, cATO, CMMS, SOC2 mandates.

A better, faster way to secure your software

RapidFort empowers teams to break free from this reactive approach to cybersecurity. Our comprehensive vulnerability management platform seamlessly integrates into the existing CI/CD pipeline and provides the tools and features to automatically premeditate 95% of Common Known Vulnerabilities (CVE) and up to 90% Attack Surfaces in just three steps without any code changes.

1

RF Curated Images

RapidFort Near Zero CVE Images
• Hardened NIST 800-70 images
• FIPS 140-2 validation
• RF Justification for POAMs
• Fresh images daily

2

Instrument & Profile

RapidFort DevTime Protection Tools
• Generate SBOM and RBOM
• Prioritize vulnerability remediation
• Integrated CIS / STIG Benchmarks
• Filter noise with RapidFort advisory

3

Harden & Defend

RapidFort RunTime Protection Tools
• Secure unused components
• 90% Reduced software attack surface
• Boost software efficiency and security
• Consume less than 1% overhead

RapidFort's Three Step Process

1: RF Curated Images

Build on a secure foundation with hardened container images containing near-zero CVEs.

2: RF Instrumenting & Profiling

Understand your applications' behavior by profiling them in your CI/CD pipeline during your development and test cycles.

3: RF Hardening & Defending

Build hardened and optimized workloads with only the components needed, regardless of your development framework or OS used.

Key Benefits

Reduce Development Costs

- 10% reduction in development costs
- Mitigate 60% of software patching
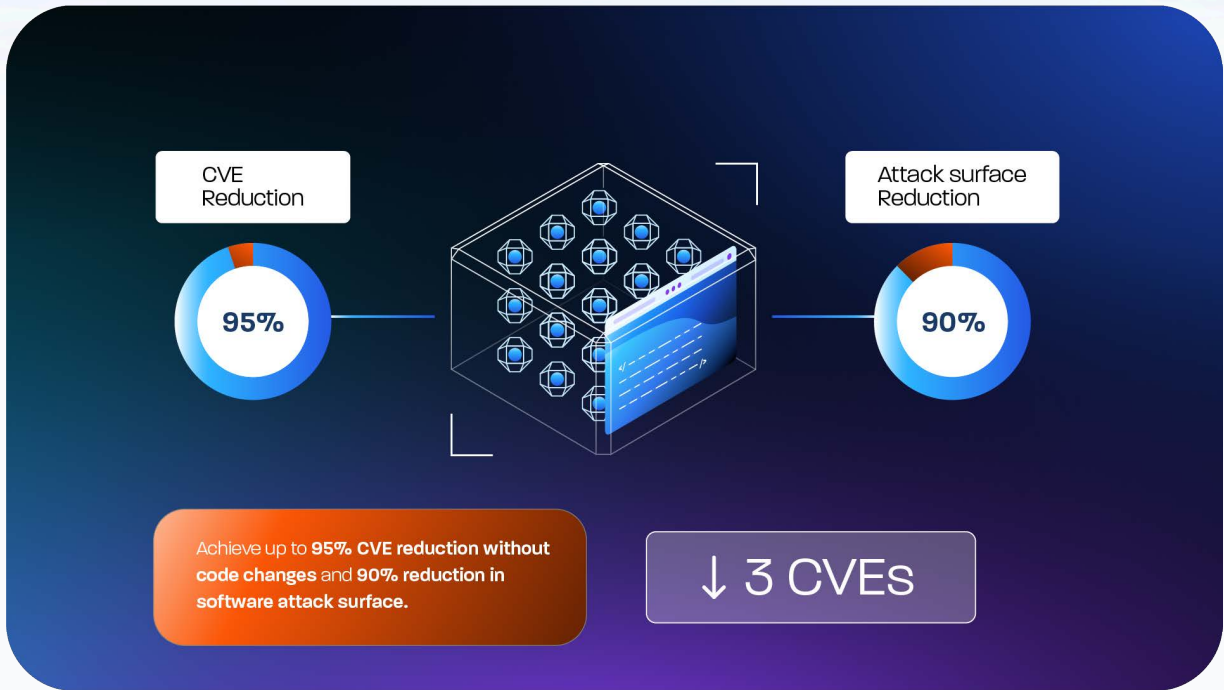

Accelerate Software Release

- 2-3 week reduction for major release
- CI/CD integration to automate hardening process
- Integrates seamlessly with existing container infrastructure.

Fast-track Compliance

- 3 months reduction for compliance
- FedRAMP / cATO / CMMC / SOC2 - achieve compliance 30% faster with CIS / STIG benchmarking and hardening tools

RapidFort reduces development costs, shortens release cycles, and ensures compliance with regulations like FedRAMP, cATO, CMMC, SOC2

CVE Reduction

95%

Attack surface Reduction

90%

Achieve up to **95% CVE reduction without code changes** and **90% reduction in software attack surface.**

↓ 3 CVEs

Integrate RapidFort directly into your existing workflows and tech stack
